

Integrity Testing Service

Peace of Mind

Receive an email notification every morning that your Sage 300 data has been copied to a secure facility where databases and Sage 300 shared folder data has been restored and a data integrity checking program has been run. The data integrity log is attached to the email. If there are any warnings or error messages, the email can be forwarded to your Sage 300 business partner for corrective action before problems grow.

Notification example:

 @soxbackup@gmail.com Sample Company Restore 2011/02/17 01:32:17 SUCCESS Thu 2/17/2011 1:32 AM 58 KB

Features and Benefits

- **Sage 300 Testing Focused** – There are many cloud-based backup services, but almost none actually restore databases, let alone run application specific integrity checks.
- **Data is Restored and Tested** - It has been said that “a backup is not a backup until it has been restored”. Are those tapes you’ve been cycling for years readable or stretched and out-of-alignment? If your server died, could you even buy a tape drive capable of reading them?
- **Avoid Expensive Data Repairs** – When your Sage 300 data loses integrity and you jump on the problem right away, costs are minimal. Some data problems cascade over time and repair can be nearly impossible or may cost thousands of dollars.
- **Subject Line Status** – The subject line indicates success or failure. Only open the email when a failure is indicated.
- **Automatic Archive Cycling** – Multiple copies of your Sage 300 data are retained. Should data need to be restored, your Accpac business partner can advise on an appropriate selection.
- **Accommodates Poor Quality Connections** – The service supplies software specifically designed to recover from errors due to poor or variable quality connections such as supplied by satellite.
- **Robust Notification** – Email notifications do not require the use of a mail client such as outlook, or the use of an outbound mail (SMTP) server that may block messages.

Pricing

Monthly charges are based on total daily data upload: \$299 for the first 500Mb and \$100 for each additional 500Mb afterwards. Data uploaded is reduced and compressed: 500Mb of data uploaded represents a Sage 300 database of approximately 10Gb. The testing service is governed by a service level agreement which is available for review at tairox.com, Services.
